

**Are High Energy Bills, Air Pollution,
Global Warming,
And Foreign Oil
Bringing you **DOWN**?**

It's time to look **UP.
Have Xcel Pay **YOU**,
Clear the Air,
Let OPEC keep Their Oil.
You have the **SUN**!**

**The Sierra Club invites you to a FREE,
non-commercial presentation on Solar Energy.**

When: Thursday, November 15, 2007
6:00 to 8:00 p.m.

Where: Eugene Fields Branch Library
810 South University Blvd
(University & Ohio)
Denver, Colorado

The two hour presentation and discussion will explain the workings of solar electric, solar hot water and solar heating systems. SolSource, one of Colorado's leading renewable energy companies, will provide a brief overview of the history of solar technology and talk about the various economic, energy and environmental advantages of each of the different systems.

Information about the costs and financial (federal tax and Xcel utility rebates) incentives will be presented. We'll also detail the considerations that go into designing a system, choosing the optimal location and the steps involved in installing it on your roof.

Our focus will be primarily on the use of solar by residential homeowners, but also highlight how the technology is being used by commercial and institutional customers. We'll offer examples of how homeowners and businesses are both reducing their energy bills, increasing their property value and helping to curb global warming.

Seating is limited so please R.S.V.P. to dan.disner@sierraclub.org or 303-861-8819
